Professional Summary

Computer Science graduate specializing in Multimedia Computing, with hands-on experience developing web applications, interactive games, and multimedia projects using PHP, MySQL, JavaScript, HTML, CSS, and Unity. Experienced in building database-driven systems, developing 2D games, and creating interactive digital experiences through academic projects. Passionate about solving problems, creating intuitive user experiences, and continuously developing technical skills to build engaging and functional digital products.

Skills

Frontend: JavaScript, HTML5, CSS3
Backend & Database: PHP, MySQL
Programming Languages: Python, C++, Java, C#
Tools: Git, GitHub, Visual Studio Code, XAMPP, Unity, Construct 2, Scratch, Blender, Canva
Concept: Database-Driven Web Systems, Role-Based Authentication, Data Quality Validation, Interactive Game Development

Experience

Data Governance and Privacy Intern | Sunway Services Sdn Bhd **March 2026 – July 2026**

- Developed a Python script using Visual Studio Code to assess, score, and clean structured and unstructured datasets based on data quality dimensions.
- Validated data integrity, accuracy, completeness, and consistency across datasets.
- Applied data quality assessment techniques to support data governance and privacy initiatives.

Software Development Intern | East Automation & Engineering Sdn Bhd **March 2023 – October 2023**

- Developed an Attendance and Project Management Records System (e-APMRs).
- Built using JavaScript and HTML, records staff attendance and tracks project progress.

Full-Time Barista | Chatime Malaysia Sdn Bhd **January 2020 – June 2020**

- Managed point-of-sale operations, cash reconciliation, and order processing while maintaining customer service during peak hours.
- Monitored inventory, replenished stock, and completed daily store opening and closing procedures.

Projects

Multisensory Digital Storytelling Platform | Unity, C#

- Developed an interactive narrative platform to enhance emotional literacy through branching decision-making scenarios.
- Implemented local data persistence using PlayerPrefs to track user progress and history logs.
- Used additive scene management to support a seamless interactive experience.

Online Blood Bank System (OBBS) | PHP, MySQL, JavaScript, HTML, CSS

- Developed a web-based system to support blood donor registration and blood distribution.
- Implemented database-driven functionality to support blood donation management.

FKA Lab Inventory System (FKALIS) | MySQL, JavaScript, HTML, CSS

- Developed a web-based inventory system for the Faculty of Civil Engineering at UiTM Pahang.
- Implemented role-based login for developers, system administrators, moderators, and laboratory assistants to manage and display database records.

Game Development Projects | Unity, Construct 2, Scratch, HTML, PHP

- Rescue at Dawn: Developed a 2D side-view platform adventure game set in a magical medieval world using Unity.
- Ngosek Dash: Created a Halloween-themed 2D side-scrolling game featuring obstacle avoidance and candy collection using Construct 2.
- Math Bingo: Developed an educational game using HTML and PHP to support learning basic mathematical operations.

Education

Diploma in Computer Science
Universiti Teknologi MARA (UiTM)

Bachelor of Computer Science (Hons.) Multimedia Computing
Universiti Teknologi MARA (UiTM)

Additional Information

Certificate :

- Fundamentals of Sustainability and Technology – IBM SkillsBuild
- Artificial Intelligence Fundamentals – IBM SkillsBuild

Language : English, Bahasa Melayu
